### DETAILED ACTION

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 1-19 are directed to a computer implemented method of calculation in accordance with a mathematical algorithm. Claim 20 merely recites a programmable gate array implementing the method without any defined structure, and thus is no more than an abstract idea. In order for a claimed invention that is directed to such a computation or abstract idea to be statutory, the claimed invention must accomplish a practical application. That is the claimed invention must transform an article or physical object to a different state or thing, or produce a useful, concrete and tangible result. *State Street*, 149 F.3d at 1373-74, 47 USPQ2d at 1601-02. Also see "Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility", OG Notices: 22 November 2005. It is clear from claims 1-20 that the claims merely involve calculations and manipulations of data in performing computations. The claimed invention does not transform an article or physical object to a different state or thing. The inputs are numbers and the output is also a number. The result of the invention is merely a numerical value without a practical application recited in the claims that makes it a real world result. Thus, the result is not useful, concrete and tangible. Therefore, the 1-20 are directed to non-statutory subject matter as the invention as claimed fails to accomplish a practical application.
